FLUX BINDINGS

2011-2012

LIGHTEN UP

Featherweight Package, Heavyweight Performance

After nineteen years of crafting the best bindings in the world, we've gone on a diet.

From titanium mounting hardware to reengineered baseplates, our bindings are better than ever.

Even though we've shed some serious weight, we haven't sacrificed an ounce of performance or durability.

From backcountry booters to urban rails, Flux has your back.

The new lightweight blueprint for comfort and performance

CONSTRUCTION

2011-2012 FLUX BINDINGS TECHNOLOGY

SCAN THIS!

ALPHA HIGHBACK

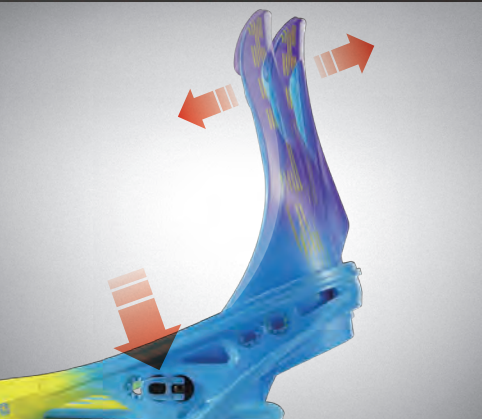

Minimalist Design, Maximum Performance

The Alpha destroys the highback status quo. By eliminating traditional forward lean adjustments and redesigning the composition we have reduced the highback weight by 35%. Traditional forward lean adjusters often compromise performance by transferring energy between the highback and heelcup through a narrow contact point. By relying on a series of mounting options on the baseplate to provide a range of forward lean angles, the Alpha Highback is able to distribute pressure more evenly across the heelcup and maximize power transfer.

Heel Cup Forward Lean

- Reduced highback weight 35% by removing the forward lean adjuster on the rear.
- Pressure evenly distributed throughout the heel cup.
- Provides better power transfer. (Traditional forward lean system only provides one narrow contact point)

Hybrid Cushion

- Soft
- Soft edges provides comfort.
- Hard
- Dense middle provides stability and durability.

ALPHA BASE

Featherweight and bombproof

The culmination of nineteen years of innovation, the Alpha Base delivers pro performance in an exceptionally lightweight package. The base features higher sidewalls that increase the binding's responsiveness and durability, while its milled out design sheds serious weight. The sidewall and heelcup incorporate a flange beam that further increases strength. A range of mounting options on the heelcup allows you to rotate the highback to maximize the transfer of energy. The flat rocker sole has rounded edges that enable your board to flex more naturally. When compared to the Genetic Base, the new Alpha Base is 16% lighter.

Flange Beam

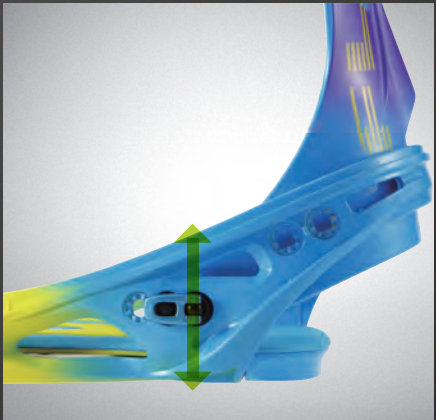

- Incorporated throughout
- Provides increased strength

Flat Rocker Sole

- Rounded, outer base of sole
- Promotes and compensate for natural board flex

Asymmetrical Heel Cup

- Matches ankle and heel movement
- Improved rider stability

High Sidewall Bridge

- More Durability
- More Edge-to-edge Response
- Milled out design

Hybrid Footbed Cushion

- Various densities of EVA sandwiched to provide a custom feel
- Soft
- Better shock and vibration dampening
- Hard
- Contact area constructed with thin, dense layer of EVA
- Resist abrasions and provides support. Combine hard & soft densities for better cushion and durability

Asymmetrical Heel Design

- Matches natural shape of heel
- Provides even power transfer and more edge control

FLUX ORIGINAL PATENT

UU FIT & FTM

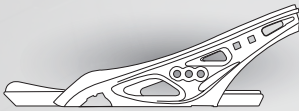

FTM [US PATENT:7278651]

UU FIT [US PATENT:6604746]

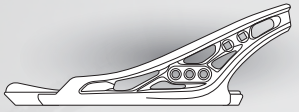

BASEPLATES

DESIGN

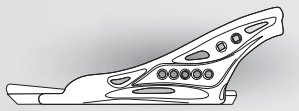

ALPHA BASE

The culmination of nineteen years of innovation, the Alpha Base delivers pro performance in an exceptionally lightweight package. The base features higher sidewalls that increase the binding's responsiveness and durability, while its milled out design sheds serious weight. The sidewall and heelcup incorporate a flange beam that further increases strength. A range of mounting options on the heelcup allows you to rotate the highback to maximize the transfer of energy. The flat rocker sole has rounded edges that enable your board to flex more naturally. When compared to the Genetic Base, the new Alpha Base is 16% lighter.

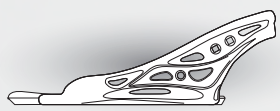

GENETIC BASE

The Genetic Base represents a fusion of science and rider driven feedback. To maximize performance and comfort, this base is informed by extensive studies of the form and movements of the foot. The inner portions of the baseplate are thinner than the outer to create a responsive binding that allows you to better feel your board.

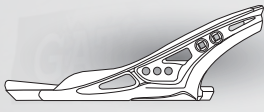

COMFORT BASE

By increasing the height of the baseplate sidewalls, we've created a binding that strikes a perfect balance between stability and comfort. The medium flex of the Comfort Base makes it an excellent match for riding everything and anything.

SIMPLE BASE

The name says it all. The Simple Base creates a basic binding that's fully adjustable to meet your needs. This softer base absorbs vibrations and allows your board to flex to its fullest.

VOGUE BASE

Engineered around the shape and size of female feet, the Vogue Base is female driven-it's not a men's baseplate repackaged with a flashy color scheme. Urethane dampeners in the heel absorb shock and allow your board to flex more naturally, while the asymmetrical design of the baseplate ensures that it perfectly cradles your foot. Female-specific sizing also helps end the search for an excellent fit.

MATERIAL

SUPER CARBON BLEND 15

The DMCC Light provides a softer, skate-like feel through its 15% carbon blend. Baseplates rocking the Super Carbon Blend 15 incorporate rotary discs that utilize a shock absorbing 30% glass and fiber blend.

SUPER CARBON BLEND 25

To create our lightest and most responsive baseplate, we've created concoctions of carbon and virgin nylon. These magic potions maximize shock absorption, minimize weight, and do an exceptional job transferring energy to your board. To provide a crisp ride, the DMCC is built around a 25% carbon blend. Baseplates rocking the Super Carbon Blend 25 incorporate rotary discs that utilize a shock absorbing 45% glass and fiber blend.

SUPER BLEND 45

Thanks to a shock absorbing nylon that is mixed with a 45% glass and fiber blend, the Super Blend is rock solid and incredibly responsive. Baseplates with this blend also feature vibration dampening rotary discs built around a 45% glass and fiber mixture.

CUSHION

PERFORMANCE BLEND 30

The Performance Blend 30 is capable of destroying everything and enduring anything. This versatile construction blends responsiveness with flexibility through the use of a 30% glass and fiber blend in both the baseplate and rotary disc.

HYBRID BLEND 30

By using a slightly softer version of our 30% blend of glass and fiber, the Hybrid Blend produces a more forgiving binding that is still responsive. This blend is also used in the binding's rotary disc.

COMFORT BLEND 15

The Comfort Blend provides a perfect, forgiving flex for beginners and lightweight riders. Comfort Blend baseplates use a 15% glass and fiber blend, while their rotary discs use a stiffer, shock-absorbing 30% blend of glass and fiber.

HYBRID FOOTBED

Anatomically correct Hybrid Footbeds are ready to make love to your feet. Soft EVA sections absorb shock and minimize rider fatigue, while harder sections provide abrasion resistance and maximize support in high contact areas.

SKY CUSHION

The Sky Cushion provides running shoe comfort without the sweatbands and spandex. Toe and heel cushions absorb shock through a combination of EVA material and strategically placed air pockets. Say goodbye to heel bruises and fatigue.

HIGHBACKS

DESIGN

ALPHA HIGHBACK

The Alpha destroys the highback status quo. By eliminating traditional forward lean adjustments and redesigning the composition we have reduced the highback weight by 35%. Traditional forward lean adjusters often compromise performance by transferring energy between the highback and heelcup through a narrow contact point. By relying on a series of mounting options on the baseplate to provide a range of forward lean angles, the Alpha Highback is able to distribute pressure more evenly across the heelcup and maximize power transfer.

F-TECH ASYM HIGHBACK

The asymmetrical F-Tech Highbacks provide a soft outer flex that allows you to press your boardslides to their fullest and a firmer inside flex to better transfer power. For a more responsive freeriding setup, you can simply switch the highbacks with one another. The symmetrical forward lean adjusters ensure that no matter how you rock your highbacks, your power will go directly to your board. This highback is available in three flexes. The DMCC uses a carbon and nylon ASYM highback for a stiff and poppy ride. To create an extremely versatile highback that's ready to tackle the entire mountain, the SF45 utilizes an all purpose nylon mix. To maximize flexibility for lapping the park or sessioning rails, the SR15 is crafted from a high-tech urethane blend.

PERFORMANCE HIGHBACK

The Performance Highback has the most forward lean in the Flux line up, yet it remains committed to freestyle flexibility. To allow for more lateral movement, the top of the highback is nearly flat.

SIDE ARC HIGHBACK

The asymmetrical Side Arc Highbacks provide a medium flex perfect for all mountain destruction. By swapping the highbacks with each other, you can rig your ride for freestyling or freeriding.

FLEXIBLE HIGHBACK

To provide a quick edge-to-edge feel, the Flexible Highback is torsionally stiff. It features cutouts that shed weight and provide a forgiving lateral flex.

CHAIR HIGHBACK

Like its Vogue Base counterpart, the Chair Highback is designed around the feet and needs of female riders. Strategically placed slots at the top of the highback shed weight while also uniformly transferring power to your deck.

MATERIAL

SUPER TOUGH NYLON PLUS

The materials make the magic. Our exclusive carbon and nylon blend creates an exceptionally responsive highback for aggressive riders. This blend also excels at absorbing vibrations.

SUPER TOUGH NYLON

Our Super Tough Nylon blend gives you all day comfort by reducing shock-no bad vibes here. This material molds perfectly to your boots, creating a loving yet lively ride perfect for the pipe or park.

URETHANE

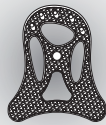

A Flux First... borrowed from skateboarding. Yet again, snowboarding rips off another great idea from skating. You know, the same guys that brought you ollies, handrails, and halfpipes. For decades, skate wheels have been made from urethane. Urethane is durable, yet forgiving... kind of like some complicated superhero with a soft heart. We tweaked this technology and applied it to bindings, creating a new freestyle standard. Urethane provides a strong balance of support while maximizing flexibility. If you're hoping to bone out your airs like it's 1991 or press rails into the future, our urethane highbacks await you.

CUSHION

HYBRID CUSHION

A dual density EVA cushion on the highback also strikes the perfect balance between shock absorbing comfort and bombproof stability.

A.V.P.-Anti Vibration Pad

This highback padding is constructed with a new EVA material that provides a better hold of the boot in the heelcup, no slippage. It also allows for a better interface between boot and binding, providing the rider with a more responsive feel.

STRAPS

ANKLE STRAP

ABSOLUTE FIT STRAP

The new Absolute Fit ankle straps feature cored-out centers that shed weight while eliminating potential pressure points. Our top of the line straps provide the most responsive ride.

F-TECH 3D FIT STRAP

The three dimensional shape of the F-Tech 3D Fit strap provides an excellent fit free of pressure points. It can manhandle the entire mountain.

L-GUIDE SYSTEM

Our L-Guide System ensures that your ladders quickly and cleanly lock into your binding's ratchets. Plus, it keeps those pesky straps and ladders out of the way.

UU FIT [US PATENT:6604746]

Affectionately referred to as Patent 6604746, or UU Fit for short, this design secures the ends of our binding straps to the heelcup and highback. This allows the ankle strap to better transfer power and minimize pinching. Rather than simply applying a downward force on your feet, our design cradles them in 360 degrees of love.

FTM [US PATENT:7278651]

FTM MONOCOQUE

To keep things light yet comfort filled, our FTM Monocoque toe straps use a molded, one-piece design. By wrapping the contours of your boot, these straps minimize pressure points and maximize responsiveness.

FTM CLASSIC

The patented three dimensional design of this toe strap readily conforms to any boot shape. The core is constructed of two strips of TPU that lock your boots to your bindings for powerful, slip-free linkage.

OTHERS

RATCHET BUCKLE

ALPHA RATCHET BUCKLES

Even our ratchets have gone on a diet-we've redesigned them for lighter weight. For an easier to use design that's frozen finger friendly, we've also increased the angle of our buckle levers.

LOW PROFILE RATCHET BUCKLE

The Low Profile Ratchet Buckle smoothly and securely keeps you connected to your shred stick. Whether you're turning toeside or throwing a 1080, you can trust these things.

SCREWS

TITANIUM SCREWS

By focusing on all the details, we incorporated Titanium hardware on the DMCC and DMCC-Light for durability and weight reduction.

Romain's All Mountain Destroyer

Welcome to the future—no time travel necessary. Whether you're dropping chutes, getting rad on kickers, or throwing double corks in the pipe, the DMCC adapts to the terrain you aim to slay. Asymmetrical F-Tech Highbacks can be swapped to tailor your kit for big mountain lines or park laps. A carbon-laden Alpha Base and an Absolute Fit strap paired with titanium hardware create an incredibly responsive, yet featherweight ride. The DMCC makes your old bindings look like a pair of bungee cords.

Insane Performance in a Ridiculously Light Package

From the parks of Mammoth to the streets of Minneapolis, the DMCC-Light delivers a skate-like feel for diehard shredders. Like a runway model with a heroin addiction, this binding is light. In addition to the flyweight Absolute Fit strap and Titanium hardware, the Alpha Base and Highback keep things light by eliminating the weight associated with a traditional forward lean adjuster. Multiple highback mounting points on the baseplate allow you to take advantage of a range of forward lean options. Don't be fooled, this thing is Chuck Norris tough.
