14-15

Nothing compares to riding with friends. Whether your days are filled with park laps, rail sessions, or backcountry missions, shredding with a crew adds even more meaning to time spent on the snow. At Deeluxe, we're honored to be riding with you. For almost twenty years, our boots have embodied a commitment to craftsmanship and progressive design.

As a tight-knit independent company, we collaborate closely with our riders to develop boots for the specific terrain they ride. This design-driven approach enables us to craft footwear as diverse as today's riders. It also serves as a solid excuse to spend as much time on the snow as possible. After all, we are just as passionate about riding as we are about designing boots. This passion ensures every boot we craft is worthy of bearing our name. No matter where you ride, you can depend on Deeluxe.

FAST LACING DEVICE & LACING SYSTEMS

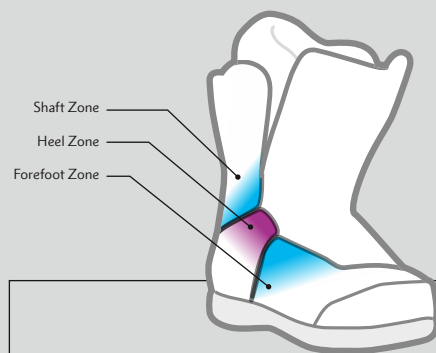

SIMPLE BUTTON

PUSH TO OPEN

TAP TO CLOSE

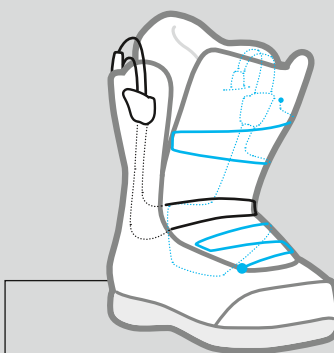

We worked closely with our customers and team riders to refine the FLD system. Our new, ergonomic design is especially user-friendly. Whether tightening your boots or taking them off, you'll appreciate its simplicity and efficiency. Needless to say, this new design offers the same reliable lace hold for which the FLD is known.

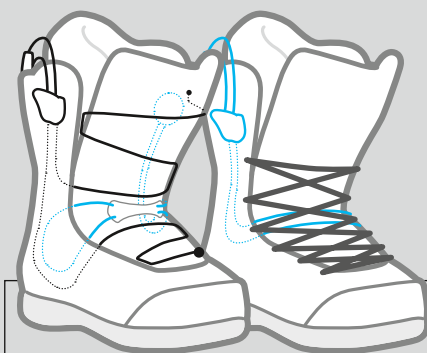

3 Zone Concept

The three part division of the boot allows the heel, forefoot, and shaft zones to be isolated and laced separately. When the heel zone is laced, it holds the heel and stabilizes the ankle.

C3 Lacing

Two separate lacing systems allow you to customize the fit and flex of the heel, forefoot, and shaft zones.

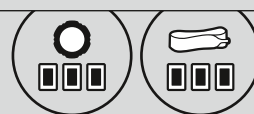

C3 Lacing & Boa®

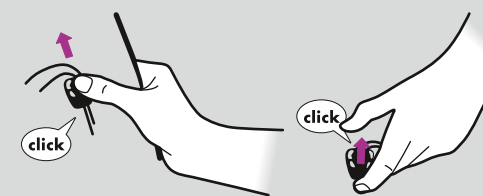

The Boa® system allows you to customize the heel zone's fit.

C3 Lacing and Traditional Laces

Traditional laces adjust the forefoot and shaft zone.

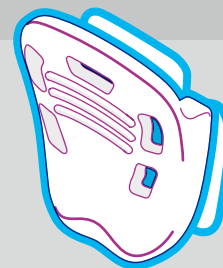

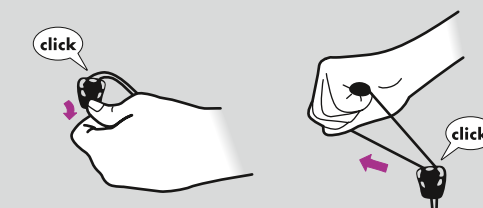

Open position

Two ways to **open** the FLD

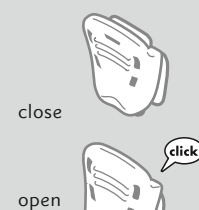

POWERSTRAP

By securing the calf in place, the Powerstrap adds additional support to a boot's lacing system.

Closed position

Two ways to **close** the FLD

Step In

Open FLD

Take grips from holster and open power strap

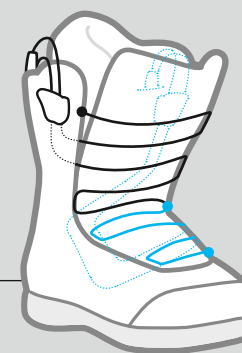

Open boot and liner

Pull grips outward and lock FLD

Pull grips up to lace

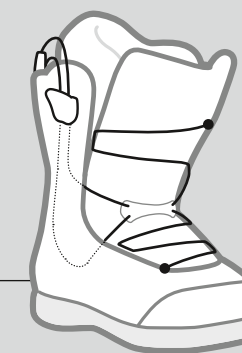

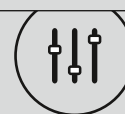

Adjust the tightness of the laces based on your preferences.

Important!
To avoid cramps, do not lace too tightly.

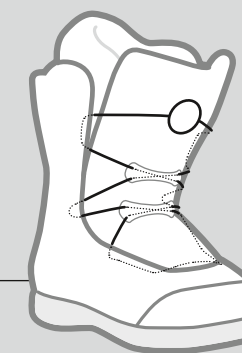

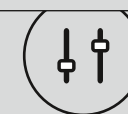

Section Control Lacing

Two handles allow you to adjust the boot's lacing system and its three target zones.

SCL Single

A single handle allows you to adjust the heel zone or the forefoot and shaft zone.

Boa® Lacing

The Boa® system allows you to microadjust the boot's three target zones.

ONE — CUSTOM FLEX IN A STREAMLINED DESIGN

In addition to offering an abundance of comfort, the Del Mar's **ONE** Construction and optional TPS Shields enable you to customize its fit and flex. Three different flexes are possible.

To keep feet warm and dry, the boot sports a Sympatex® Moisture-Tech Membrane.

A separate Backbone and Comfort Zone help optimize the boot's fit and performance. The Comfort Zone is essentially an extremely plush, waterproof liner.

FLEX & SHELL CONSTRUCTION

TPS Shield

MEDIUM 56820-10000/0
HARD 56820-10000/0

Available as an accessory, the TPS Shield strengthens a boot's tongue, providing a stiffer flex and additional support.

Dupont® Surlyn Highback

The highback contributes to the durability and stability of the boot.

Combined with additional reinforcements, the highback also aids in dictating its stiffness.

Sympatex® Membrane

The Sympatex® Membrane provides protection from the elements.

It is environmentally friendly and recyclable.

D-Tex Membrane

This waterproof and breathable membrane ensures your feet stay warm and dry.

Waterproof Construction

Precise stitching and a sandwich construction ensure water can't penetrate the boot's shell.

After all, a dry foot is a happy foot.

Flex Rate

The flex rating indicates a boot's stiffness.

Performance Rate

The performance rating evaluates a boot's responsiveness, as well as the caliber of its technical features.

To ensure your feet find their soulmate, we've developed a system that not only rates boots on their flex, but also on their performance. This provides a more precise assessment of each boot's capabilities. Thanks to these ratings, it's especially easy to find the Deeluxe boot that best meets your needs.

Custom Flex

Our Custom Flex Construction enables riders to adjust the support and responsiveness of their boots.

The ankle lacing allows you to secure your foot in the boot.

Asymmetrical Flex for All Mountain Riding

The large flex area and soft reinforcement on the boot's inside offer maximum comfort.

The small flex area and stiff reinforcement on the boot's outside provide complete support.

The defined fold zone in the joint area eliminates bulging to provide strong heel hold and a refined flex.

Pro Flex for High-speed Riding

This construction is designed to meet the needs of freestylers who demand premium performance.

The design provides the perfect blend of flex and stability.

Defined flex zones in the boot's joint area offer maximum support and eliminate bulging.

Easy Flex for Maximum Comfort

This design provides maximum comfort.

The boot's flex window prevents it from buckling and bulging.

TF PREMIUM & LINER TECHNOLOGY

Thermo Flex Premium

Our Thermo Flex Premium liners sport a leather lining that provides unsurpassed comfort and aids in regulating moisture. Equally important, these liners are designed to be heat-formed to your feet—providing a fit that is truly customized. To take full advantage of this feature, we recommend enlisting the assistance of your local Deeluxe dealer.

Thermo Flex

This liner is heat-formed to your foot. It is placed in a special oven that is heated between 90-110°C. While cooling, the liner is fitted to your foot and will retain its form. Consequently, we recommend you have your liners professionally molded to guarantee the perfect fit.

Performance Flex

The Performance Flex liner is designed to offer premium performance and optimal support. The highback provides stability while special L-shaped pads anchor the heel.

Comfort Flex

Plain and simple, the Comfort Flex will make your feet smile. As soon as you step into these liners, your feet will feel at home and ready to ride. These liners firmly hold feet in place, maximizing comfort.

Shell Fixation

A Velcro fastener anchors the liner to the shell. This prevents the liner from slipping and offers an especially stable heel hold.

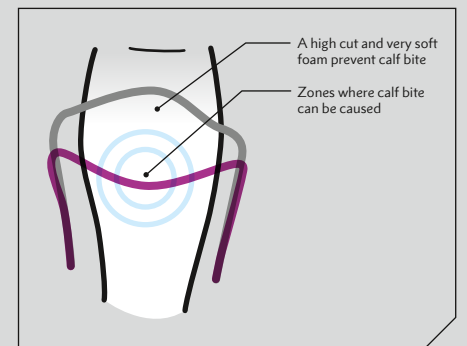

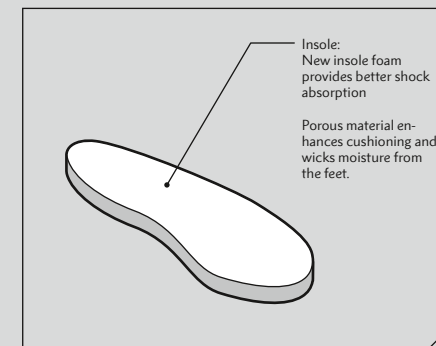

Heel Harness

The Heel Harness functions much like an ankle brace. It binds the liner, securing ankles in place and protecting them.

E-Lacing

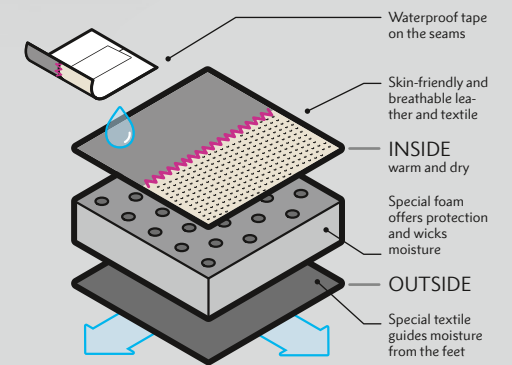

Super strong and incredibly efficient, the E-Lacing system featured in our liners keeps your feet comfortable while holding them securely.

Oven

561130-1000/9110 220V 52×37×45 cm
561130-1000/9110 220V 52×37×45 cm

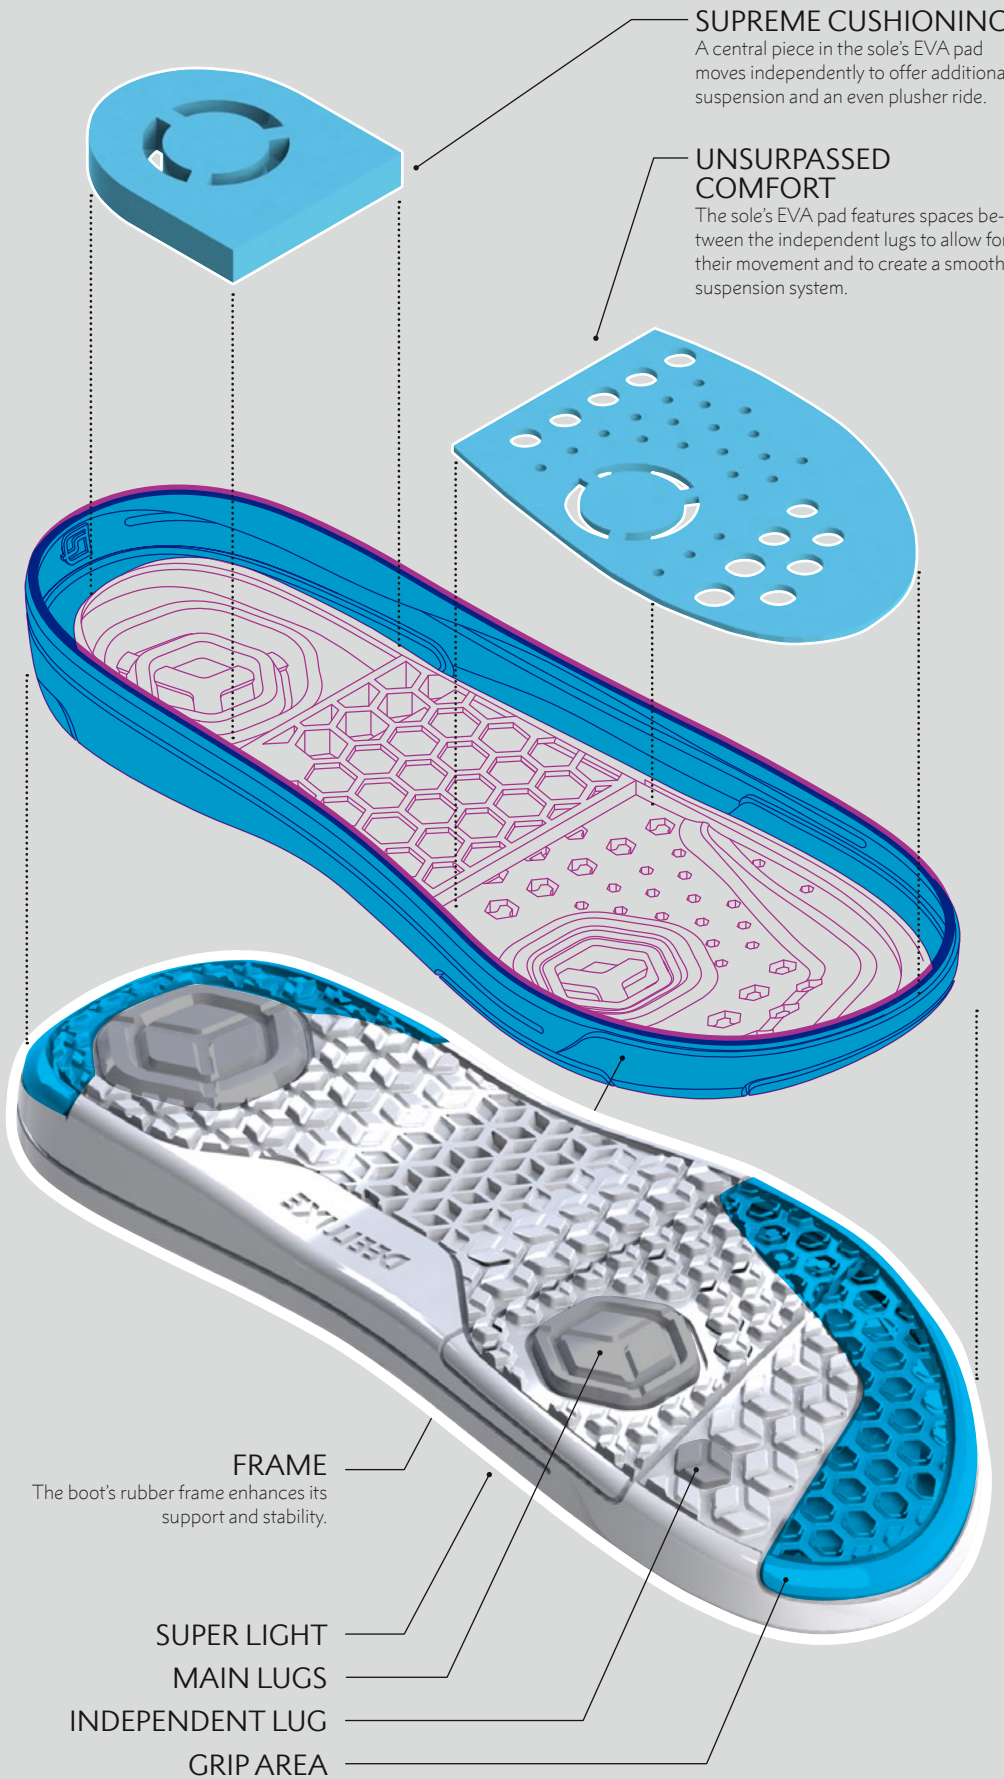

For a perfect fit, use our oven to heat-form liners. Place liners in the oven and heat it to 110 °C (230 °F). As the liners cool, fit them to your feet. They will retain this form.

Moisture-Tech Membrane by Sympatex®

A Sympatex® membrane with a Moisture-Tech lining keeps things warm and dry by wicking moisture away from your feet and preventing water and snow from penetrating the boot. This combination also helps eliminate stinky feet.

D-LUG & OUTSOLES

D-Lug Outsole

Our new, patent-pending D-Lug outsole is designed to better cushion and cradle your feet. Dual impact zones provide enhanced traction and absorb vibrations. To provide additional cushioning, the sole features independent lugs that work like suspension. The new outsole also acts as a frame that enhances the support and stability of the boot.

Low Profile

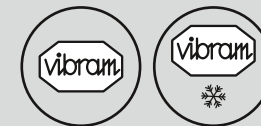

The D-Lug outsole provides a sneaker-style appearance, enhanced board feel, and aids in preventing injuries.

ILS — Independent Lug Suspension

To provide an especially plush ride, we developed ILS — Independent Lug Suspension. Each lug on a boot's outsole acts like a mini-suspension system.

Vibram® Outsole & Vibram® Ice Trek Outsole

Back welt enables the use of crampons

Toe bumper for foot protection and grip

Undercut heel for secure braking

Increased surface area for durability at high-wear points

Engraved shank for better grip on uneven ground

Traverse Traction

Positioned on the sides of the sole, these grip zones provide enhanced lateral hold when crossing slopes.

EVA Cushion

EVA is a special material that maintains its flexible properties at all temperatures. EVA provides optimal performance even in extreme cold.

Anti-Bruise Circles

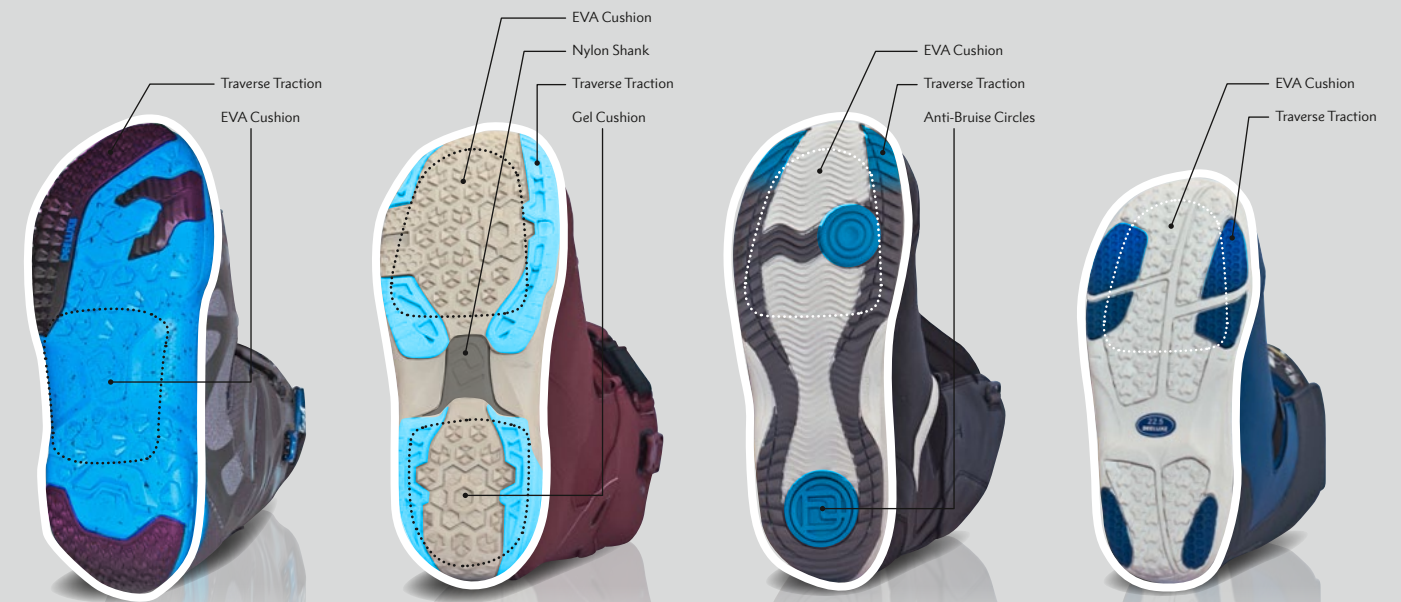

Located under the ball and heel, these shock-absorbing circles provide additional padding while creating a direct connection to the EVA midsole.

Gel Cushion

Gel cushions offer progressive force-distribution properties. These cushions protect your feet against impacts while still providing a responsive ride.

Nylon Shank

The nylon shank stabilizes your feet, preventing torsion between your heel and forefoot.

Conquest Outsole

The Conquest Outsole is made from a special EVA mixture that provides an enhanced board feel similar to that offered by skating or surfing. This material also offers exceptional cushioning. To enhance traction, the sole features grip zones in the heel, toe, and ball.

Conweb Outsole

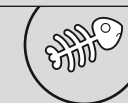

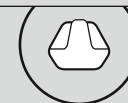

The Conweb Outsole features a multi-dimensional hexagonal tread. This offers a secure hold in every direction and enhances feel at the boot-board interface. An integrated nylon shank provides torsion control by translating forces throughout the sole and stabilizing it.

Fishbone Outsole

The Fishbone Outsole blends the aesthetics of a classic sneaker sole with technical features. Despite its simple appearance, this sole offers a foot-cradling design, excellent traction, cushioned areas under the ball and heel, and minimal weight.

Kid's Outsole

Designed specifically for young rippers, this low-profile sole offers comfort and burly lugs for enhanced traction.

backcountry series

The boots in the BC series get you up—and down—the mountain in safety, comfort, and style. Now in its fourth year, the BC Series has gained a following among diverse backcountry riders. From dawn patrol tours to spine walls in Alaska, these boots are as comfortable as they are dependable. Consequently, Deeluxe has emerged as a quiet leader in equipping riders for the backcountry. Boots like our Independent BC offer a fresh perspective on proven designs while models like Xavier de Le Rue's signature boot, the Spark XV, pioneer new technology and help riders redefine what is possible.

Spark Summit BROWN

With a leather shell and lining, the Spark Summit offers premium performance and decadent luxury. Paired with the Boa® system, its C3 lacing provides the perfect fit and all-day dependability.

inspiration series

Our team riders inspire us. In addition to pushing themselves, they're constantly pushing us to build better boots. As a rider and product-driven company, we view them as essential partners in progression. We're honored to work with some of the best riders in the world to design and develop footwear for their specific needs. The result is a collection of diverse boots that are at home dropping pillow lines, hitting back-country booters, and sessioning concrete and steel. Like the riders whose names they bear, these boots are agents of expression.

Del Mar G5s GREY

NEW

The Del Mar G5s is the future of shredding. Inspired by skate shoes, the boot sports an integrated liner and backbone, as well as a low profile sole to shed weight and offer a skate-like feel. Sympatex® Moisture-Tech membrane keeps feet warm and dry.

lara series

Women are charging harder than ever. From the backcountry of Whistler to the rails of Helsinki, females are at the forefront of progression. And consequently, they demand more from their gear. At Deeluxe, we collaborate with riders like Aline Bock and Hiromi Takahashi to better meet these demands. Their vision and feedback drive the innovation that defines our Lara collection. These boots are built specifically for female feet, blending substance with style. Whether women are dropping chutes, riding rails, or getting their start on the bunny hill, we've got footwear for them.

Empire Lara BURGUNDY

Afterhour Mid BLACK

Whether sessioning the streets or the bar, the Afterhour Mid can handle it. Made of genuine leather, the boot's fleece lining and skate outsole provide comfort and versatility while a heat-reflecting layer offers insulation.

561400-1000/9110
5/6/7/7.5-11

Afterhour HASH / SESAM

For the Afterhour, Deeluxe collaborated with TJ Schneider to move its craftsmanship—and game—beyond the snow. This minimalist leather boot offers plenty of comfort for going out on the town.

561300-1000/9213
5/6/7/7.5-13

TJ Schneider, Afterhour, Vancouver, Canada
